Quiz, 10 questions 1 / 1 point

5.

Finding good hyperparameter values is very time-consuming. So typically you should do it once at the start of the project, and try to find very good hyperparameters so that you don't ever have to revisit tuning them again. True or false?

- True
- False

Correct

1/1 point

6.

In batch normalization as presented in the videos, if you apply it on the lth layer of your neural network, what are you normalizing?

- $igcap W^{[l]}$
- $\bigcirc z^{[l}$

Correct

- $b^{[l]}$
- $igcap a^{[l]}$

7.

In the normalization formula  $z_{norm}^{(i)}=rac{z^{(i)}-\mu}{\sqrt{\sigma^2+arepsilon}}$  , why do we use epsilon?

#### To speed up convergence Hyperparameter tuning, Batch Normalization, Programming Framework Soid division by zero

10/10 points (100%)

Quiz, 10 questions

Corre	ct	
	To have a more accurate normalization	
	In case $\mu$ is too small	
<b>~</b>	1/1 point	
8.		
	of the following statements about $\gamma$ and $eta$ in Batch Norm are true?	
	There is one global value of $\gamma\in\Re$ and one global value of $\beta\in\Re$ for each layer, and applies to all the hidden units in that layer.	
Un-se	lected is correct	
Corre	They can be learned using Adam, Gradient descent with momentum, or RMSprop, not just with gradient descent.	
	The optimal values are $\gamma=\sqrt{\sigma^2+arepsilon}$ , and $eta=\mu$ .	
lln-so	lected is correct	
011-36	iected is correct	
	$eta$ and $\gamma$ are hyperparameters of the algorithm, which we tune via random sampling.	
Un-se	lected is correct	
	They set the mean and variance of the linear variable $z^{\left[l ight]}$ of a given layer.	
Correct		

10/10 points (100%)

Quiz, 16 questions

	raining a neural network with Batch Norm, at test time, to evaluate the neural network on a new le you should:	
$\bigcirc$	Use the most recent mini-batch's value of $\mu$ and $\sigma^2$ to perform the needed normalizations.	
0	Perform the needed normalizations, use $\mu$ and $\sigma^2$ estimated using an exponentially weighted average across mini-batches seen during training.	
Corre	ect	
	Skip the step where you normalize using $\mu$ and $\sigma^2$ since a single test example cannot be normalized.	
	If you implemented Batch Norm on mini-batches of (say) 256 examples, then to evaluate on one test example, duplicate that example 256 times so that you're working with a mini-batch the same size as during training.	
	1/1	
	point	
10. <b>Which</b>	of these statements about deep learning programming frameworks are true? (Check all that apply)	
	A programming framework allows you to code up deep learning algorithms with typically fewer lines of code than a lower-level language such as Python.	
-		
Correct		
	Even if a project is currently open source, good governance of the project helps ensure that the it remains open even in the long term, rather than become closed or modified to benefit only one company.	
Corre	ect	
	Deep learning programming frameworks require cloud-based machines to run.	
Un-selected is correct
